NOW LIVE IN PRODUCTION

Microapp SOPs

Comprehensive Documentation & Development Resources for ZI Chat Microapps

RELEASE DATE	VERSION	STATUS
November 17, 2025	1.0.0	Production

Executive Summary

We are excited to announce the launch of the **Microapp Development Platform**, a comprehensive documentation and resource hub designed to empower developers across ZoomInfo to build focused, efficient mini-applications that integrate seamlessly with ZI Chat.

This platform provides end-to-end guidance, from initial setup through production deployment, enabling teams to create custom solutions that enhance productivity and workflow efficiency. With innovative "Vibe Coding" capabilities powered by AI, even team members without extensive coding expertise can build functional applications.

Platform Access

Live URL: https://chat.zoominfo.co/micro-apps/80/262

Available now for all authorized developers and engineering teams.

Getting Started Journey

Follow three essential steps to go from zero to a deployed microapp in just 45 minutes. Each step builds on the previous one to give you a comprehensive understanding of the entire development process:

1

Initial Setup

20 minutes

Configure your development environment with all the necessary tools, dependencies, and access permissions required to start building microapps

2

Create Your First Microapp

15 minutes

Create your first fully functional microapp from scratch. Learn the basic structure, components, and how to integrate with ZI Chat

3

Build & Deployment

10 minutes

Package your microapp and deploy it to production. Learn the build process, testing, and deployment best practices

Key Platform Features

Microapp Foundation

Complete architectural overview, rules, constraints, and essential planning questions before development begins

Vibe Coding with AI

No-code/low-code development using Cline in Visual Studio Code - AI does the work for you with simple instructions

Database Explorer

Check Snowflake table/view access and explore specific tables with privileges across databases

Collaboration & Git

Complete GitHub setup guide with credential configuration, repository management, and team collaboration workflows

Security Best Practices

Phase-by-phase security guidelines (Design, Build, Testing, Deployment, Governance) with RACI matrices

UI/UX Guidelines

Ready-to-use branding guidelines and interactive customization tool for maintaining brand consistency

Build & Deployment

Automated build processes with both CLI and Visual Studio integration, supporting rapid deployment cycles

Video Tutorials

Complete step-by-step video guides covering the entire microapp development journey

Comprehensive Documentation Modules

1. Microapp Foundation

→ What are microapps and why use them in ZI Chat

→ Architecture overview and technical fundamentals

→ Rules, constraints, and best practices

→ Essential planning questions before development

→ Key resources and development environment requirements

2. Getting Started Journey

→ Recommended learning path with estimated completion times

→ Step-by-step progression from setup to deployment

→ Interactive navigation between phases

→ Access to video tutorials and comprehensive guides

3. Initial Setup (20 minutes)

→ Essential access prerequisites (Snowflake, ZI Chatbot, Anthropic API, JFrog, Zscaler)

→ Visual Studio Code and Node.js installation

→ Cline setup in Visual Studio Code for AI-powered development

→ NPM configuration and project environment setup

4. Create Your First Microapp (15 minutes)

→ Automated project scaffolding tool for instant setup

→ Manual setup option with step-by-step command-line instructions

→ Project structure understanding and best practices

→ User interface design fundamentals

→ Testing and deployment workflow overview

5. Build & Deployment (10 minutes)

→ Build package preparation and optimization (10-30 seconds typical build time)

→ Microapps platform access and navigation

→ Testing vs. production deployment decisions

→ Local testing setup and microapp creation

→ Upload, verification, and update procedures

6. Database Explorer

→ Check table/view access across Snowflake databases

→ Explore specific tables and privileges

→ Request access through ServiceNow integration

→ Real-time database connectivity and queries

7. Collaboration & Git

→ Setup Git and configure credentials (Mac and Windows)

→ Generate GitHub Personal Access Token (PAT)

→ Clone repository to local machine

→ Pull latest changes and branch management

→ Commit, push, pull request, and merge workflows

→ Complete GitHub collaboration guide with Confluence documentation

8. Security Best Practices

→ Design Phase: Requirements gathering, security controls, and risk assessment

→ Build Phase: Secure coding, dependency management, and code reviews

→ Testing Phase: Security testing, vulnerability scanning, and penetration testing

→ Deployment Phase: Production readiness, monitoring, and incident response

→ Governance and Compliance: Ongoing security audits and compliance verification

→ RACI matrices defining responsibilities across Business Owner, Solution Architect, Security Team, and Dev Team

9. UI/UX Guidelines

→ Recommended approach: Ready-to-use branding guidelines package

→ Official color palettes with hex codes

→ Typography scale and font families

→ Logo usage and placement rules

→ UI component specifications

→ Responsive design guidelines

→ Accessibility standards (WCAG)

→ Interactive Customization Tool: Real-time preview with theme validation and export configuration files

Vibe Coding: AI-Powered Development

One of the platform's most innovative features is "Vibe Coding" - a revolutionary approach that allows developers to build microapps using AI assistance through Cline in Visual Studio Code.

How it works: Simply describe what you want in plain language, and the AI-powered assistant generates the code automatically. No extensive coding expertise required!

Benefits: Significantly reduces development time, lowers the barrier to entry for non-developers, and ensures code quality through AI-generated best practices.

Benefits & Business Impact

→ **Accelerated Development:** Reduce microapp development time from days to under 45 minutes with comprehensive guidance

→ **Democratized Development:** AI-powered "Vibe Coding" enables team members without extensive coding expertise to build applications

→ **Standardization:** Ensure consistency across all microapps with unified guidelines and best practices

→ **Security Compliance:** Built-in security frameworks protecting applications throughout the development lifecycle

→ **Self-Service Enablement:** Empower developers to build and deploy without extensive support requirements

→ **Enhanced Productivity:** Streamlined workflows and automated processes reduce manual overhead

→ **Knowledge Centralization:** Single source of truth for all microapp development resources

→ **Brand Consistency:** Automated branding tools ensure all microapps align with ZoomInfo standards

Target Audience

This platform is designed for **everyone at ZoomInfo with access to ZI Chat** - regardless of your technical background or coding experience. Our revolutionary AI-powered "Vibe Coding" feature transforms ideas into functional microapps by simply describing what you need in plain language. Whether you're solving a business problem, automating a workflow, or building a custom tool, you have the power to create without being a coding expert. This platform empowers anyone to turn concepts into reality.

Ready to Get Started?

Access the platform now and begin building your first microapp

Access Platform

Support & Resources

Documentation: Complete guides available within the platform covering all aspects of development

Video Tutorials: Step-by-step video walkthroughs for visual learners

Confluence Documentation: Extended guides and team collaboration resources

Contact Support: Reach out to the development team for assistance

Point of Contact: Bhuvnesh Gupta (bhuvnesh.gupta@zoominfo.com)

Feedback & Suggestions: Join our Slack community for discussions, ideas, and peer support at #ai-coe-microapp-sops

Project Team

This platform was made possible through the collaborative efforts of:

→ Bhuvnesh Gupta - Team Lead

→ Pavan Kumar Yadalam

→ Khyathi Nannapaneni

→ Anusha Sangarappan
