Option 1: The "Sailboat" (Silo) Metaphor

Where to place it: Section 1 — What RevOps Actually Is. *Context: Place this right after the line: "Sales focuses on closing deals. Marketing focuses on generating leads. Customer success focuses on retaining accounts. Each team has its own dashboard, its own definitions, and its own version of what's working."*

- **VO Lead-In:** "Jacco van der Kooij ((Jacco vanderkoy) perfectly illustrates why this fragmented approach is doomed to fail by comparing a company's revenue engine to a sailboat."
- **Soundbite (Jacco van der Kooij):** "I got to know how the engine works, how the mainsail works, and how the jeep works... I cannot just sail a boat by knowing how to sail the mainsail. Today, most organizations only have that siloed perspective. They have nobody responsible for the entire system..."

- **VO Lead-Out:** "RevOps is the function that finally takes responsibility for steering that entire system, rather than just pulling on one sail."

Option 2: Orchestration vs. Reaction

Where to place it: Section 2 — The Maturity Gap. *Context: Place this right after the line: "They named a RevOps lead without giving them ownership, or they integrated tools without aligning strategy."*

- **VO Lead-In:** "When you only go halfway, you end up with an ops team that acts like a reactive help desk instead of a strategic engine. Pete Kazanjy calls out this exact missed opportunity."
- **Soundbite (Pete Kazanjy):** "Oftentimes the biggest challenge there is that the organizations... don't have their revenue operations function actually orchestrating things. It's more of they're just in the business of reacting to requests from the sales organization as opposed to orchestrating the entire lead to cash process."
- **VO Lead-Out:** "High-maturity RevOps leaves the reactive support tickets behind and actually designs that lead-to-cash architecture from the ground up."

Option 3: The Shared Data Foundation

Where to place it: Section 3 — Why RevOps Matters. *Context: Place this right after the line: "One of the primary challenges RevOps solves is fragmented or inconsistent data. By establishing a single source of truth, RevOps enables leaders across departments to see the same metrics..."*

- **VO Lead-In:** "Without this shared foundation, different departments will constantly argue over whose numbers are right. Mike Madsen emphasizes that a unified data strategy is non-negotiable."
- **Soundbite (Mike Madsen):** "You have to have like a really cohesive strategy across all the layers of data... marketing needs to be using the same data set that product and go to market and KCS and whomever else are using..."
- **VO Lead-Out:** "When everyone looks at the same signals and the exact same pipeline, the inter-department blame game stops, and actual growth begins."

Option 4: Forcing the "One Team" Meeting

Where to place it: Section 4 — How to Think About Implementation. *Context: Place this right after the line: "Fourth, promote cross-functional communication through regular measurement reviews and joint planning sessions."*

- **VO Lead-In:** "A great test to see if you have truly implemented this communication is a simple question posed by Sid Kumar from Databricks."
- **Soundbite (Sid Kumar):** "Do you have any cadences or any calls where your whole go to market team leadership is on? Simple question. And if the answer is no, you're probably siloing some piece of it... having just a common framework to talk to each other and get aligned on like here's how we all relate to driving the customer and company outcomes."
- **VO Lead-Out:** "Forcing that shared leadership cadence is the fastest way to make the RevOps operating model stick across your entire business."

What is revenue operations why it drives predictable growth

-Silos kill revenue

HOOK (0:00–0:30)

Right now, your business is burning time and money because of the massive friction and dropped handoffs between how you market, sell, and manage your customers. marketing team is screaming about ignored leads, sales is complaining the leads are

trash, and customer success is furious because sales promised a feature your engineers haven't even built

Revenue Operations is the system that completely eliminates those silos so you can finally scale with precision instead of panic.

I'm going to show you what Revenue Operations actually is, what it does, why it matters, and how to think about implementing it. Whether you're new to RevOps or trying to understand a modern approach, this will give you the full picture. **Because before you buy another software tool or hire another analyst, you need to understand the one massive mistake that is quietly breaking your revenue engine. Let's start with what RevOps *actually* is...**

SECTION 1: WHAT REVOPS ACTUALLY IS (1:15–2:45)

Revenue Operations is the operating system behind high-performing go-to-market teams. It aligns sales, marketing, customer success, and other revenue-facing functions around the goal of predictable, efficient growth.

Instead of teams working in silos with scattered systems and misaligned metrics, RevOps brings structure. It centralizes data, tightens handoffs, and turns fragmented motions into a single, coordinated engine.

The outcome is less friction, faster execution, and sharper accountability across the revenue funnel.

Most companies operate in silos. Sales focuses on closing deals. Marketing focuses on generating leads. Customer success focuses on retaining accounts. Each team has its own dashboard, its own definitions, and its own version of what's working.

RevOps replaces that with a shared view of revenue performance, customer journey stages, and business processes. It sets the playbook for the entire revenue engine, from lead to close to renewal. And it uses data, not gut feel, to drive decisions at every stage.

For example, Most orgs have sales tracking pipeline in Salesforce, marketing measuring leads in HubSpot, and customer success monitoring renewals in Gainsight. None of them are talking to each other. A lead gets marked as qualified in marketing, but sales doesn't see the same signal. A deal closes, but customer success doesn't get the context they need for onboarding.

RevOps fixes that by creating one source of truth and one set of definitions everyone uses.

But here's the problem. Most companies think they have RevOps. But they don't.

If sales, marketing, and customer success still argue about whose numbers are right — you don't have RevOps.

If your forecast depends on which rep you ask — you don't have RevOps.

If onboarding is surprised by what was promised in the sales cycle — you don't have RevOps.

You have tools.Not an operating system.

NEW) SECTION 2: REVOPS VS. SALES OPS (The Air Traffic Controller) Before we dive deeper into rev ops, lets clear up a confusion that **alot of people have between Revenue Operations and Sales Operations, sometimes terms used interchangeably, but they really shouldn't be.**

There is a key distinction. Sales Ops is basically a mechanic just for the sales team. They fix bugs in Salesforce, they calculate the commission quotas, and they draw up the regional territories. But their job totally ends the exact second the deal is marked closed.

RevOps is the air traffic controller for the entire customer lifecycle. They care about the prospect from the very first time they click a Facebook ad, all the way through the grueling sales process, and all the way to their contract renewal 3 years later. They connect every single dot.

Let's explore how they do this with each of the core functions of a company

SECTION 2: THE MATURITY GAP AND WHAT REVOPS ACTUALLY DOES (2:45–5:15)

Nearly half of organizations now have a formal RevOps function. About 59 percent of companies had a RevOps team in place for one to two years, which shows how quickly adoption has grown. But most are stuck at halfway adoption. They named a RevOps lead without giving them ownership, or they integrated tools without aligning strategy.

And the difference between high-maturity and halfway adoption shows up in one place: predictability.

These orgs operate from a unified data infrastructure, with cross-functional KPIs, consistent handoff processes, and lifecycle visibility from first touch to renewal. The structure supports execution. Data flows cleanly between teams. Everyone is working from the same playbook.

So what does RevOps actually do? Here are the three core functions of Revenue Operations, Without this, forecasts break

First, sales alignment. RevOps standardizes sales processes and connects sales performance to the rest of the business. It gives sales the structure to move faster by running on consistent processes, reliable data, and real feedback loops. By aligning sales operations with marketing and customer success activities, RevOps teams reduce workflow bottlenecks and improve conversion rates throughout the revenue cycle. This alignment sharpens forecasting and makes revenue more predictable across the board.

Second, marketing integration. RevOps pulls marketing into the revenue engine, making sure campaigns, lead handoffs, and data all connect to actual sales pipeline impact. Within the RevOps framework, marketing alignment means shared data models, common definitions of lead stages, and coordinated goals with sales and success teams. When marketing and sales share the same view of the pipeline and buying signals, lead quality improves and marketing drives real, measurable impact. RevOps bridges gaps in attribution, analytics, and data usage so marketing decisions support broader business objectives.

Third, customer success coordination. RevOps brings customer success into the revenue conversation early, rather than treating it as a downstream activity. Shared systems and connected data let customer success tap into sales and marketing insights to deliver smoother onboarding and proactive support. Pulling customer success into RevOps tightens the full customer lifecycle, boosts lifetime value, and makes revenue more predictable.

SECTION 3: WHY REVOPS MATTERS (5:15–7:00)

Here's why Revenue Operations matters.

The point of RevOps is simple. Get every team that touches revenue working from the same strategy, the same data, toward the same goals.

In most orgs, that alignment doesn't exist. Teams chase different targets using disconnected tools, which creates duplicate work, broken handoffs, and unreliable data. RevOps cuts through that by enforcing shared definitions, unified systems, and consistent workflows across the go-to-market engine.

A strong Revenue Operations strategy gives companies speed, accuracy, and control. With the right structure in place, teams move faster, forecast with confidence, and stay ahead of market shifts. It replaces guesswork with visibility and builds a revenue engine built to scale.

Here's the impact. According to Salesforce, companies with more mature RevOps models reported up to 10 percent higher revenue growth over five years compared with lower-maturity peers. According to Gartner, companies with mature RevOps functions are about twice as likely to exceed revenue targets and more than twice as likely to beat profit goals compared with organizations still operating in silos.

Why does it work? Because guessing revenue is how companies miss hiring targets, miss board expectations, and burn cash.y. Data sits at the core of RevOps. Teams pull insights from sales activity, marketing campaigns, and customer behavior to spot patterns, surface blockers, and guide smarter decisions across the funnel.

One of the primary challenges RevOps solves is fragmented or inconsistent data. By establishing a single source of truth, RevOps enables leaders across departments to see the same metrics and performance indicators. This shared visibility identifies bottlenecks, opportunity gaps, and areas where process improvements will have the most impact.

Let me show you what this looks like in practice.

let's talk about the number one place companies drop the ball: the handoff. A huge deal finally closes. The sales rep is thrilled, they pop champagne, they ring the gong in the office, and they mark the deal closed-won in the CRM. And then... absolute silence.

The customer success manager doesn't get an automated notification. They have no idea who the key decision makers are or what specific pain points the sales rep promised to solve. Two weeks go by, and the customer is forced to get on an apology call and answer the exact same discovery questions the sales rep already asked them a month ago. The customer is sitting there thinking, "Do these people even work in the same building?" RevOps fixes this by automating the entire sequence so the transition feels completely seamless to the buyer. So now lets look at how to actually implement revenue operations at your company.

SECTION 4: HOW TO THINK ABOUT IMPLEMENTATION (7:00–8:30)

Before building out RevOps, teams need a clear read on how things actually work today. Where are the data gaps? Which teams are working off different playbooks? How is performance tracked, and does anyone trust the numbers?

Operational maturity goes beyond tools or headcount. It hinges on how consistent the work is across teams, and how well data flows from one function to the next.

Leadership alignment matters just as much. Executives need to set the revenue goals and define how teams work together to hit them. Without that top-down clarity, RevOps efforts stall fast, either from confusion over ownership or resistance to changing the way things run.

Most companies implement software before they fix definitions. That's backwards.
Here are the best practices for Revenue Operations teams.

First, centralize data and establish shared definitions so teams work from the same information.

Second, standardize processes across departments to reduce friction in customer journey transitions.

Third, identify key performance indicators that matter to overall business growth.

Fourth, promote cross-functional communication through regular measurement reviews and joint planning sessions.

This approach shifts companies from scattered ops teams to a unified revenue engine built to execute strategy at scale. Shared data, tight processes, and aligned goals drive real results.

Here's what to do next if you're just starting with Revenue Operations.

–

SECTION 5: NEXT STEPS (8:30–9:15)

Start with a clear read on how things actually work today. Map the handoffs between sales, marketing, and customer success. Identify where data breaks down or where teams are using different definitions.

Here are the growth metrics to track. Revenue growth rates over time. Customer acquisition cost relative to lifetime value. Sales pipeline velocity. Conversion rates between funnel stages. Customer retention and churn rates. Data from across the funnel feeds back into planning cycles, campaign adjustments, and resourcing decisions.

By tracking these metrics under a unified RevOps model, companies trace performance trends, identify inefficiencies, and test changes that improve business outcomes.

The real takeaway is control. Shared metrics bring clarity to performance, aligned workflows reduce friction for customers, and leadership gains a clearer view of what's driving growth.

In markets that move fast and leave no room for guesswork, RevOps gives teams the structure to deliver consistent results. It's a critical capability for any company serious about driving revenue with precision.

CLOSING (9:15–9:45)

Here's the bottom line.

Revenue Operations changes how companies actually run revenue. When teams share data, processes, and goals, work gets cleaner and decisions get sharper. Sales, marketing, and customer success stop operating in isolation and start moving as one system built for execution.

RevOps isn't a department. It's the operating system that turns scattered teams into a predictable revenue engine.

If you're building or scaling RevOps, start with the fundamentals. Centralize your data. Align your goals. Tighten your handoffs. That's where control begins.
